Lui Lam's Scientific Papers

Names of undergraduates are bolded; those of graduate students are in bold and underlined

L. Lam = Lui Lam = Lin Lei

1968

   - A Calculation of the Production of Pions by 450 MeV Protons on Nuclei.

1970

   - New Exact Solutions of Dirac Equation.

   - Dirac Electron in Parallel Electric and Magnetic Fields.

   - Escape of Electromagnetic Waves from Magnetic Neutron Star.

1971

   - Motion in Electric and Magnetic Fields. I. Klein-Gordon Particles.

1972

   - X-ray Compton Profiles of Li and Na: Theory and Experiments.

1973

   - Core-orthogonalization Effect and the Compton Profile of Sodium Metal.

   - Surfaces de Fermi, Profil Compton et Effets a N-corps.

1974

   - Scattering Form Factors of Atoms, Molecules and Solids.

    - Momentum Density and Compton Profile of the Inhomogeneous Interacting Electronic System. II. Application to Atoms.

1976

    - On the Transition Temperature of Ferroelectric and the Blume-Hubbard Scheme.

1977

    - Rigorous Bounds in Structural Phase Transitions.

    - Temperature Dependence of the Transverse Spin in the Transverse Ising Model.

    - Anharmonic Phonons and Structural Phase Transitions.
   - Dissipation Function and Conservation Laws of Molecular Liquids and Solids.

   - Reciprocal Relations of Transport Coefficients in Simple Materials.

   - Constraints, Dissipation Functions and Cholesteric Liquid Crystal.

   - Microscopic Theory of Superionic Conductors.

   - Statistical Mechanics of Superionic Conductors.

   - Phase Transitions and Dynamics of Superionic Conductors.

   - Irreversible Thermodynamics of Thermoviscous Solids with Microstructures.

   - Compton Profiles of Ne, Ar and Kr.

   - Microscopic Theory of First Order Phase Transitions in Liquid Crystals.

   - Nematic Liquid Crystals and Landau's Theory of Phase Transitions.

   - Nematic-Isotropic Transitions in Liquid Crystals.

   - Nonlinear Liquid Crystals.

   - Critical Properties of Nematic-Isotropic Transitions in Liquid Crystals.

29. Lin Lei: Wuli 9, 8 (1980).
   - A Simple Derivation of Free Energy in Liquid Crystals.

   - Superionic Conductors.

   - Nontricritical Behavior of Nematic-Isotropic Transition in Liquid Crystals.

32. Lin Lei: Baike Zhishi (Beijing) 6, 60 (1980).
   - Liquid Crystals.
   - On the Critical Exponents of Liquid Crystals.

   [Chinese Phys. **1**, 110 (1980)].
   - Generalized Suzuki Formula and Its Application in Liquid Crystals.

   - Landau-de Gennes Model of First Order Phase Transitions: Gaussian Approximation.

   - Landau-de Gennes Model of First Order Transitions.

   - Molecular Theory of Liquid Crystals Including Anisotropic Repulsion.

   - Liquid Crystal Research in China.

   - Light Scattering in Homologous Series of Liquid Crystals.

   - I-N-A Phase Diagrams of Liquid Crystals.

   - Liquid Crystals Phases and "Dimensionality" of Molecules.

   - Specific Heats Above and Below the Clearing Point of Nematic Liquid Crystals.

   - Effective Exponents of Nematic Liquid Crystals.

   - Pretransitional Effects of Mixtures of Nematic Liquid Crystals.

   - Pressure Effects of Nematic Liquid Crystals.

   - Molecular Theory of Liquid Crystals.

   - Order Parameter and Correlation Function of Classical Systems and Ising Model.

48. Lin Lei, **Shu Changqing**, Shen Juelian, P.M. Lam and Huang Yun:
- Soliton Propagation in Liquid Crystals.

- Pressure Effects of Nematic Liquid Crystals. I.

- Pressure Effects of Nematic Liquid Crystals. II.

- Flexoelectric Constants of Liquid Crystals.

- Solitons in Condensed Matter.

1983

- Electric Field Effects on the Elastic Constants of Nematics. I.

- Discussions on the Physics, Chemistry and Applications of Thermotropic Liquid Crystals.

- Electrohydrodynamic Instabilities of Nematic Liquid Crystals: Effect of an Inclined Electric Field.

1984

- Progress in Liquid Crystal Physics.

- Soliton Propagation in Shearing Liquid Crystals.

- Inequalities for Liquids in a Periodic Potential.

- Theory of Homologous Liquid Crystals. II. Orientation Correlation Functions.

1985

- Temporal and Spatial Distribution of Director Angles in Soliton Experiments of Liquid Crystals.

- Molecular Orientations and Optical Patterns of Rotating Nematics.
   - Comment on "On Solitary Waves in Liquid Crystals".

   - Multiple Scales Analysis of a Nonlinear Ordinary Differential Equation.

   - Generation and Detection of Propagating Solitons in Shearing Liquid Crystals.

   - Solitons Generated by Pressure Gradients in Nematic Liquid Crystals.

1986

   - Variation of Velocities and Widths of Two-Dimensional Solitons with Pressure Gradients in
     Nematic Disc Cells.

   - Oblique Roll Instability in an Electroconveective Anisotropic Fluid.

   - The Balancing Act.

72. L. Lam and Shu Changqing: in Proceedings of the International Conference on Nonlinear Mechanics,
   - Nonlinear Waves in Liquid Crystals.

   - Comment on "Nerve Propagation and Wall in Liquid Crystals".

1987

   144, 345 (1987).
   - Experiments on Ring-Shaped Solitons in Nematic Liquid Crystals.

   - Pattern Formation in Thermal Convective Nematic Liquid Crystals.

   - Phase Transition in Bowlic Liquid Crystals.

   - Bowlic Liquid Crystals.

   - Flexoelectric Effect of Solitons in Nematic Liquid Crystals under Uniform Shear.

   - Experiments on Time Dependence of Light Intensities of Two-Dimensional Solitons in Nematic Disc Cells.
   - Perturbed Solitons in Nematic Liquid Crystals Under Time-Dependent Shear.

   - On the Static Friction of a Rolling Wheel.

   - Two-Dimensional Axisymmetric Solitons in Nematic Liquid Crystals.

   - Liquid Crystals.

   - Theory of Liquid Crystals.

1988
   - Bowlic and Polar Liquid Crystal Polymers.

   - Ab Initio Theory of Linear and Nonlinear Optics of Liquid Crystals.

   - Moving Nematic-Air Interfacial Patterns in Hele-Shaw Cells.

   - Propagation of White Ring-Shaped Solitons in Nematic Liquid Crystals.

89. L. Lam: in 3rd Asia Pacific Physics Conference, edited by
   - Possible Liquid Crystalline High Tc, Superconductors.

   - Time Dependence of Optical Intensities in Two-Dimensional Soliton Experiments with Circular
     Nematic Liquid Crystal Cells.

1989
   - Waves in Anisotropic Media

   - Interfacial Waves in Hele-Shaw Cells of Liquid Crystal-Air Systems.

   - Dynamics of Viscous Fingers in Hele-Shaw Cells of Liquid Crystals: Theory and Experiment
94. L. Lam, in *Liquid Crystals - West '89*, edited by L. Lam (Society of Archimedes, San Jose, 1989).
- Response of Bowlic Liquid Crystals in External Fields.

1990

- Pattern Changes in Electrodeposits of CuSO$_4$.

- Pattern Formation in Electrodeposits.

- Experiments on Electrodeposit Patterns.

1991

- Unsolved Nonlinear Problems in Liquid Crystals.

- Stability of Dense Morphologies in Electrodeposit Pattern Formation.

- Fractal Patterns in Burned Hele-Shaw Cells of Liquid Crystals and Oils.

- Electrodeposit Tree Patterns in Linear Cells: Experiment and Computer Models.

1992

- Chapter 1. Introduction.

- Chapter 2. Solitons and Field Induced Solitons in Liquid Crystals.

- Chapter 3. Solitons in Shearing Liquid Crystals.

- Statistical Model of Polar Nematic Polymers.

- Chaos and the Foreign Exchange Market.
   - Active Walker Models for Filamentary Growth Patterns.

   - Filamentary Patterns and Rough Surfaces.

   - Transmission Studies of Explosive Vaporization of a Transparent Liquid Film on an Opaque Solid Surface Induced by Excimer-Laser-Induced Irradiation.

   - Active Walker Models for Filamentary Patterns and Rough Surfaces.

   - “Boltzmann Active Walker and Rough Surfaces”.

   - “Active Walker Models: Growth and Form in Nonequilibrium Systems”.

   - “Optical Solitons in Liquid Crystals”.

   - “Reentrant Solitons”.

   - Frequency and Temperature Dependence of Refractive Indices of Liquid Crystals.

   - Intrinsic Abnormal Growth.

   - Active Walks.

   - Abnormal Spatio-Temporal Growths.

   - Active Walkers Models for Complex Systems.
   - Dielectric Breakdown Patterns in Thin Layers of Oils.

   - Neural Network for Classification of Active Walker Patterns.

   - Growth Pattern Formation in Copper Electrodeposition: Experiments and Computational Modelling.

125. L. Lam, R.W. Koepcke and T.Y. Lin, in Rough Sets and Soft Computing, ed. T.Y. Lin (Society of
   Computer Simulation, San Diego, 1995).
   - Active Walks and Soft Computing

   - Solitons in Liquid Crystals: Recent Developments

127. L. Lam, in Defect Structures, Morphology and Properties of Deposits, edited by H.D.
   - Electrodeposition Pattern Formation: An Overview.

1996 128. L. Lam, M.C. Veinott, D. Ratoff and R.D. Pochy, in Fluctuations and Order, edited
   - Noise Induced Abnormal Growth.

   - Chapter 1. Introduction.

130. L. Lam, in Introduction to Nonlinear Physics, edited by L. Lam (Springer, New York, 1997).
   - Chapter 10. Integrable Systems.

133. Ru-Pin Pan and L. Lam, in Proceedings of Workshop on Centenary Celebration of Chiao Tung
   University (School of Science, National Chiao Tung University, Hsinchu, 1997).
   - Nonlinear Science: A Quiet Revolution in Natural and Social Sciences.

1998 134. L. Lam, in Nonlinear Physics for beginners, edited by L. Lam (World Scientific, River Edge, N.J.,
   1998).
   - Chapter 1. Introduction

135. L. Lam, in Nonlinear Physics for beginners, edited by L. Lam (World Scientific, River Edge, N.J.,
   1998).
   - Chapter 2. Fractals.

136. L. Lam, in Nonlinear Physics for beginners, edited by L. Lam (World Scientific, River Edge, N.J.,
   1998).
   - Chapter 3. Chaos.
    - Chapter 4. Solitons.

    - Chapter 5. Pattern Formation.

    - Chapter 6. Cellular Automata.

    - Chapter 7. Complex Systems.

    - Chapter 8. Remarks and Further Reading.

    - Simple Multifractals with Sierpinski Gasket Supports.

    - Critical Behavior in the Transitions to Convective Flows in Nematic Liquid Crystals.

    - Active Walks and Path Dependent Phenomena in Social Systems.

2000

    “The Birth of Bowlic Liquid Crystals”.

    “Active Walks: Pattern Formation, Self-Organization, Complex Systems”.

2001

    “Electric-Field Induced Retardation of Granular Flows in a Pipe”.

    “Intermittent Granular Flow in the Presence of an Electric Field”.

“Granular Flows Through Vertical Pipes Controlled by an Electric Field”.

   “Science Communication: What Every Scientist Can Do and a Physicist’s Experience”.
